

Made by Honey Bees

Life Mel is a unique bee product which is widely used to help with the side effects of chemotherapy and radiation treatment.

Life Mel is produced by regular honey bees in regular beehives. The honey bees are fed a special mixture containing more than 18 different medicinal herbs. The medicinal herbs were carefully chosen so that their combined effect gives Life Mel its unique properties.

Life Mel has a positive effect on the blood profile; it raises the White Blood Cell count, the Red Blood Cell count and haemoglobin level, thus strengthening the immune system and the body's ability to resist various diseases.

A recent clinical study has shown Life Mel to be effective in decreasing the incidence of anemia in 64% of the patients, decreasing the incidence of severe neutropenia and lowering the incidence of potentially fatal thrombocytopenia (low platelets). ingredients. It is the result of more than 20 years of research performed by Zuf Globus Laboratories.

Life Mel made by honey bees is specially produced in a controlled environment which guarantees a pollution-free pollination process. Other than collecting the honey from the hive and packing it, the honey is not artificially treated in any way and no ingredients are added after extraction of honey from the hive.

“According to the recent clinical study, the active ingredients in Life Mel honey are absorbed directly in the blood, where they stimulate blood-cell production, increase the quantity of platelets and raise the haemoglobin level. It has been showing exceptional results when taken by cancer patients receiving chemotherapy or radiation therapy whose bloods are depleted by their treatment. The company stresses that the honey is not a cancer cure,” says Dr Chris Steele, the well known GP who writes and lectures extensively on health matters, including regular slots on ITV's This Morning show.

Life Mel uses nectar derived from therapeutic herbs that include Siberian Ginseng, Echinacea and Uncaria Tomentosa (Cat's Claw), combined with a selection of natural ingredients including iron, protein and vitamins. This makes a unique form of honey. Siberian Ginseng has traditionally been used as a tonic, whilst Echinacea is a traditional herbal remedy and well regarded for its ability to help support the immune system. Uncaria Tomentosa is believed to have antioxidant properties and has also been traditionally used to benefit the immune system.

Recommended use: Two 5g teaspoonfuls a day – one in the morning on an empty stomach and one last thing at night. Life Mel should be sucked slowly. Life Mel has a distinctive and pleasant aroma and flavour. **Price in Ireland €48 (120g)**
